PROLIFICS, AWARD-WINNING IBM SYSTEMS INTEGRATOR, ACHIEVES “READY FOR IBM RATIONAL” MARK FOR PROLIFICS BUILD CONDUCTOR

New York, New York – June 6, 2011– Prolifics, one of the largest end-to-end systems integrator specializing in IBM technologies, today announced its ‘Ready for IBM Rational’ technical validation for its Prolifics Build Conductor with Rational Team Concert V3.0.1.

Continuous integration is becoming increasingly important when dealing with remote development teams, where companies need to integrate and test all of the changes made by multiple team members. Prolifics Build Conductor adds to Rational Team Concert’s automation capabilities to automatically produce and test integration builds of WebSphere Process Server, Message Broker, Enterprise Service Bus, and WebSphere Portal.

“Prolifics has once again shown innovation through support for continuous integration,” said Michael Loria, vice president, IBM Rational Business Development, “with the automation of the release process for one of Rational’s primary user communities deploying on IBM WebSphere platforms.”

With Prolifics Build Conductor (extending IBM Rational Team Concert), customers have the solution for out of the box continuous integration. Additionally, it automates more than just the build; it deploys the components to a server and runs development tests against the deployed components. Through Build Conductor’s integration to Rational Team Concert, Build Conductor adds continuous integration support for the WebSphere platform to the IBM Rational Collaborative Lifecycle Management (CLM) solution enabling more productive and transparent delivery of WebSphere applications.

Features of Prolifics Build Conductor include:

- Out-of-the-box continuous integration for WebSphere Message Broker, ESB, Process Server and Portal
- Zero custom scripting required
- Simple to setup using standard Team Concert build definition mechanisms
- Deploy once to your repository, and share across all your projects – no more copying/modifying scripts
- Automates more than just build
- Deploys the built components to a server
- Runs your development tests against the deployed components
- Comes with documentation on continuous integration practices

With Prolifics Build Conductor, coding issues are discovered earlier, avoiding the need to resolve complex overlapping changes, and improving the application quality.

About Prolifics

Founded in 1978, Prolifics is the largest systems integrator specializing in IBM technologies, having garnered awards for technical excellence across IBM’s entire software portfolio. A Premier Level IBM Business Partner, Prolifics provides expert services including architectural advisement, design, development, and deployment of end-to-end SOA and Portal solutions. In 2008, Prolifics joined with SemanticSpace Technologies and Arsin Corporation to form SemanticSpace Group – expanding its global presence and offerings. Prolifics has serviced more than 3,000 customers worldwide across a broad range of industries.
