

Lombardi Solutions: Enable continuous process improvement

A unified business process management (BPM) environment for process improvement.

IBM WebSphere Lombardi Edition Shared Model and unified Authoring Environment saves time and effort at every step of development – from requirements through testing and deployment. Now you can build everything you need – diagrams, forms, rules, and services – in one place. Lombardi gives your end users the visibility and control over processes that they have always wanted and with the WebSphere Lombardi Edition Optimizer the whole team can pinpoint potential improvements that will have the biggest business impact.

Need more collaboration, process governance, higher reuse? Lombardi's Process Center provides authors and architects with access to the organization and management of all process artifacts, process applications and reusable functionality that are created as part of a BPM program.

At Prolifics, our consultants are experts in Business Process Management and can help you analyze your existing business rules and processes, identify areas needing optimization, create modeling scenarios and automate manually performed processes. Prolifics has implemented a number of Lombardi solutions, allowing organizations in various industries to streamline key processes and give the insight needed to control cost, increase sales, manage risk and improve customer satisfaction. Winning IBM's 2010 Outstanding Business Process Management Solution Award and several SOA awards, Prolifics is recognized for its technology leadership through deep skills, a proven BPM methodology, and high customer marks on over 70 SOA engagements.

Build Faster. Work Smarter. BPM Your Way.

Prolifics and WebSphere Lombardi Edition can help:

- ⇒ Give the right users the right information at the right time, all through a unified interface
- ⇒ Track the KPIs and expose key metrics to stakeholders and management
- ⇒ Leverage existing investments in systems and services in the IT landscape
- ⇒ Increase productivity by reducing manual work
- ⇒ Interact effectively and efficiently with disconnected applications and systems
- ⇒ Provide consistent prioritization throughout processes
- ⇒ Reduce or eliminate incomplete or inaccurate data flow between systems
- ⇒ Take control over system and business events and exceptions
- ⇒ Increase visibility into process performance
