

Prolifics, 2010 winner of IBM's Outstanding BPM Solution Award; 2008 winner of IBM's Outstanding SOA Solution; and two-time winner of the Overall Technical Excellence Award and 1 of 3 WebSphere Service Providers retained by IBM, specializes in WebSphere, SOA and Portal implementations. We look forward to assisting with your project and can help every step of the way to ensure a smooth transition to a proven, secure and flexible WebSphere environment.

Migration from Oracle WebLogic...

to IBM WebSphere

Prolifics has helped over 60 clients migrate their critical, enterprise applications from Oracle WebLogic (formerly BEA WebLogic) to an IBM WebSphere infrastructure. These clients have realized significant business benefits from these migrations, enabling them to leverage their existing assets while reducing overall IT costs and expanding revenue opportunities. Customers are choosing IBM WebSphere in order to:

- ◆ **Reduce overall costs of ownership** by moving to a platform with lower maintenance costs. And now you can reduce those costs even before your migration is complete. (see inset)
- ◆ **Adopt a comprehensive and integrated platform** that would allow applications to grow with market and business demands.
- ◆ **Select a platform vendor with high marks in service, training and support**, ensuring successful completion of business initiatives and longevity to application infrastructures.

Whether in an advisory role or conducting the entire migration, Prolifics can provide your organization with a team of highly skilled certified consultants who have deep technical knowledge and proven experience building, implementing and migrating applications using both the Oracle/BEA and IBM products. With this practical experience, Prolifics has built a knowledgebase of the compatibility and functional differences, as well as best practices around migration techniques.

Migration Assessment:

Prolifics' Migration Assessment walks through the following steps to evaluate your existing application server infrastructure and present you with a plan for moving forward:

Application Business and Functional Review

- ◆ Based on customer discussions, understand the business impact of the applications slated for migration and develop an application usage profile including a high level application description and typical end user profile along with scalability and uptime requirements.

Application Architectural Review

- ◆ An Application Architect investigates system topology (hardware, operating system, software), external system interaction, J2EE subsystems utilization, feature utilization and interaction with other third-party systems in order to develop a system topology diagram, an external systems dependencies list and a risk/watch areas list.

Application Source Code Review

- ◆ By examining a sampling of the applications to be migrated, develop a migration plan with a risk area assessment and mitigation plan, migration work estimate and detailed project plan.

This two hour interactive, executive workshop with a senior level Prolifics Solution Architect will discuss your high level migration

NEW! Transition Support Services

Prolifics understands what a difficult IT and Business decision it is when you consider migrating to new technology. That's why, in addition to providing Award-winning consultants who will implement your migration, Prolifics is offering "Transition Support Services" for BEA/Oracle WebLogic customers.

Your maintenance agreement costs don't have to skyrocket during your migration. Let Prolifics take over the maintenance of your J2EE applications running under WebLogic and avoid costly surcharges and renewals with BEA/Oracle!

Services are hourly fee-based and are offered as Tier One and Tier Two support with a flexible rate structure based on normal 9 to 5 business hours, extended business hours (24/7 availability) and On Site requirements.
