

Deliver Trusted Information with IBM InfoSphere

Prolifics' Information Management Services can help you leverage one of your organization's key assets — information — and make that information available to your employees, partners and customers. Whether you need better customer information for sales tactics, adherence to audit and regulatory requirements, or master data management, IBM enables information integration and flexibility by delivering industry-leading capabilities for understanding, cleansing, transforming and delivering information.

IBM InfoSphere Information Server provides breakthrough collaboration, productivity, and performance for cleansing, transforming, and moving this information consistently and securely throughout the enterprise. It can then be accessed and used in new ways to drive innovation, increase operational efficiency, and lower risk.

Prolifics Certified Consultants are deeply skilled and can assist with all aspects of your Information Server project. In addition, our Information Management team can help you with assessments and provide a roadmap for the best IBM product offerings.

Prolifics' Free Visioning Session

Call Prolifics now for a FREE Visioning Session to discuss creating a Data Layer with IBM InfoSphere Information Server!

Customers needing to create, manage, govern and deliver "trusted information" can benefit from this two hour interactive, executive workshop with a senior level Prolifics Solution Architect to understand your next steps.

Prolifics specializes in helping you identify the best approach to implementing an Information Server solution into your existing architecture. A senior level Prolifics Solution Architect will review your business and technical requirements and suggest cleansing and transformation methods to ensure the level of data quality required for compliance, risk assessment, analytics or integration. Prolifics will also identify which IBM software products are "best fits" both economically and based on specific project goals. By examining your current business processes, criteria, and your ultimate target, a solid Information Management roadmap can be created. Having this roadmap will serve as a gauge to measure and improve upon current business processes.
