

# Rational Team Concert Solutions by Prolifics

Organizations are facing increasing pressure to improve software quality and increase project visibility. With development teams often geographically dispersed, collaboration between groups can be a challenge. In order to build better software aligned with evolving business objectives, it's important to put into place a robust solution for development team collaboration.

Prolifics certified consultants, proficient with the IBM Rational software development platform, can help you throughout the entire project lifecycle ranging from design and construction to requirements and analysis to software configuration management and delivery. Rational Team Concert (RTC) provides a powerful delivery platform for project governance, integrating with source code control and build capabilities and providing Web based dashboards and real time reporting to help manage projects. The solution is designed to connect disparate teams, allowing them to improve productivity and promptly deliver high-quality software.

By leveraging the collaboration technology in RTC together with Prolifics' best practices, Prolifics can help make it easier for development teams to create a governance framework and ensure a unified process—boosting productivity, drastically improving project openness and management visibility, reducing risk while improving control, eliminating communication barriers and easily adopting agile development techniques.

## Prolifics' Proof-of-Technology Workshop

Prolifics can demonstrate the power of Rational Team Concert for your WebSphere environment. During this workshop, we will prove that RTC can help you:

- ⇒ Support transparent work item management to drive and track workflow across all team members
- ⇒ Do agile multi-level planning with workload and progress visibility
- ⇒ Gain efficient build automation to catch integrations problems quickly, share builds with the team and extend scripts
- ⇒ Provide visibility with dashboards and reports to track team activities, artifact status and progress
- ⇒ Have rich source control management for parallel development efforts for the individual and teams
- ⇒ Automate and enforce collaboration rules to ensure predictable results
- ⇒ Gain an open, integrated and standards-based tooling platform that supports an advanced Web 2.0 client or Eclipse client

**Want a hands-on experience?** Prolifics also offers this demonstration as a 1 day workshop.

### Need a deeper dive into the world of Rational Team Concert?

Our personalized 2-5 day Proof-of-Concept will utilize your sample data and artifacts to show you how this solution will benefit your organization.
