

Tivoli Identity and Access Management Health Assessment

In today's business environment, organizations are increasing the number of users they interact with each day—ranging from customers and employees to partners and suppliers. While growth is instrumental to the company's ability to compete, this means that more users are able to access mission critical information, resulting in greater security risks. IT is often challenged to effectively manage user identities throughout their lifecycle and ensure that the right users are accessing the right information.

IBM Tivoli Identity and Access Manager provide businesses with an automated, efficient and secure framework to properly manage access to business information and key application resources. By centralizing and automating the management of users, authentication, access rights, audit policy and provisioning, the solution reduces help desk calls, increases security across the enterprise and accelerates onboarding of new applications and users. Many of these features, formerly luxuries, are now necessary to operate in virtually any industry. However, often times Tivoli Identity Manager (TIM) and Access Manager (TAM) may not be configured correctly or may be missing the latest patches, leading to diminished performance and security. To make the most of your Tivoli investments, it's crucial to ensure that your software is running smoothly by assessing your TIM/TAM environment.

Prolifics' security experts have a great deal of experience implementing security solutions for organizations across various industry verticals. Our deep knowledge in Identity and Access Management and expertise in IBM Tivoli software has earned us AAA-Level Accreditation for all IBM Tivoli Security Software products.

Prolifics' Health Assessment Offer:

Prolifics' Identity and Access Management Health Assessment is designed for organizations with existing Tivoli environments utilizing: Tivoli Identity Manager, Tivoli Access Manager and/or Tivoli Directory Integrator. The assessment is fixed price and built upon a two week project plan, either remotely or onsite. Our security experts then organize the findings into a valuable report, ready to present to your organization's decision makers.

Our health assessment report includes, but is not limited to:

- ⇒ Version and patch level review and risk assessment
- ⇒ Architecture review for optimal availability per requirements
- ⇒ Secure Socket Layers (SSL) configuration review for both optimal security and performance
- ⇒ List of areas utilizing default usernames and passwords
- ⇒ Policy definition review and recommendations
- ⇒ History and log error condition patterns and recommendations
- ⇒ Information protection (verify that sensitive data is not being accessed publicly, such as through the Internet) recommendations
- ⇒ Performance review, metrics, and tuning recommendations
- ⇒ Skills assessment for effective management of the environment, including keeping it up to date with the latest IBM product patches

Based upon identified vulnerabilities, policy, availability, and performance concerns, the assessment report provided by Prolifics provides the appropriate recommended next steps to resolve these issues.
